FUEL MANAGEMENT SYSTEMS SIGMA 750

The Timeplan Fuel Management System is trusted by hundreds of companies, at thousands of sites, across the UK, Europe and the Middle East.

The Sigma 750 Fuel Management Hardware is ideal for stand-alone or smaller networks and for more complex, multi-site operations.

Benefits

Timeplan's Sigma750 Fuel island controllers offer a wide range of benefits:

- 24 Hour unattended vehicle refuelling
- Ensures fuel can only be issued to authorised vehicles
- MID 'Weights and Measures' approved system

How does it work?

The standard system uses an RFID Tag that is allocated to a vehicle and a Driver PIN number to recognise the Driver.

All data captured is then available for a wide selection of reporting options.

These reports are available through our dedicated 'Fuel Manager' web-based solution which provides a real-time data reporting opportunity from any web browser platform, 24 hours a day.

Products

Sigma 750

Key Specs

- Column, Pump or Wall Mounted
- Robust Construction
- Certified for the resale of fuel (W&M & MID approved)
- Can be linked to 4 different liquid pump operations

Key Features

- Approved for re-sale
- Increases fuel efficiency
- Reduces fuel costs
- SMS Alerts for major leak
- Prevents unauthorised fuelling
- Helps prevent fuel theft
- Identifies potential fuel losses
- SMS Alerts for theft detection
